

# Netrust Professional Services & Partners' Solutions

**Our Business Is Understanding Client's Needs And Making Technology Work For Them**

Netrust is a pioneer in recognizing the importance of a security infrastructure requirement for the development of online transactions. Its initial charter was to issue Digital Certificates to individuals and organizations, after due process of verification of their identities, to foster an environment of trust in the faceless Internet space.

As a testament to the streamlined business and operational processes within Netrust, the Controller of CA (CCA) awarded the CA License (now Accreditation) to Netrust in June 2001. As an Accredited CA, parties relying on Netrust certificates enjoy the benefits of evidentiary presumption and users are assured of the legality and security of their transactions.

Netrust has evolved over the years to become a Security Solutions Provider. Netrust has a whole suite of cryptographic-based security solutions that can optimize any investments in public key infrastructure (PKI) for PKI-based authentication, digital signing and encryption.

In addition, Netrust has formed partnerships with key vendors to complement and expand our security solution offerings, and provides the deployment and implementation expertise for the partner vendors' solutions.

## NETRUST CONSULTANTS

Netrust's team of experienced consultants can be engaged at any stage of user requirements. Netrust's consultants and specialists have been deployed worldwide as part of a broad range of engagements.

## ABOUT NETRUST

Netrust is Asia's first public Certificate Authority (CA) and Singapore's only commercial IMDA-accredited CA. Established in 1997, it has been providing digital ID certificates widely used for secure authentication, secure VPN, secure email, digital signing and other applications. Private sector companies and Government agencies such as Building and Construction Authority, Singapore Land Authority and Land Transport Authority employ Netrust's PKI solution in their environment to enhance security and convenience, and to safely complete their electronic transactions on the Internet.
